STAR 2.7.11b inherited core
genomeGenerate
accelerated; byte-identical v1 output
Conventional index format
base input
alignReads
same command and measured outputs
SAM / BAM and counts
BlackSTAR blackstar.2 accepted additions
Parallel and memory-adaptive SA, SAindex, and junction stages
Persistent named-sequence insertion Full / Overlay / Delta
Strong identity, strict manifests, payload validation
validated package
Atomic publication and checksum-pinned selection
Alignment affinity recovery for explicit OpenMP binding
Adaptive high-thread record-safe input chunks
Eligible private-genome NUMA interleave
Transcript recursion copy elision
